

Stock Analysis

Bajaj

1) We can spot inaccuracies in the way Death & Golden crossovers of 20 Day MA and 50 Day MA are signalling traders to buy and sell stocks can be seen in Q2 of 2017. If traders had followed the Sell signal in June as highlighted below, they would have missed the prolonged buy opportunity from Aug to mid Dec.

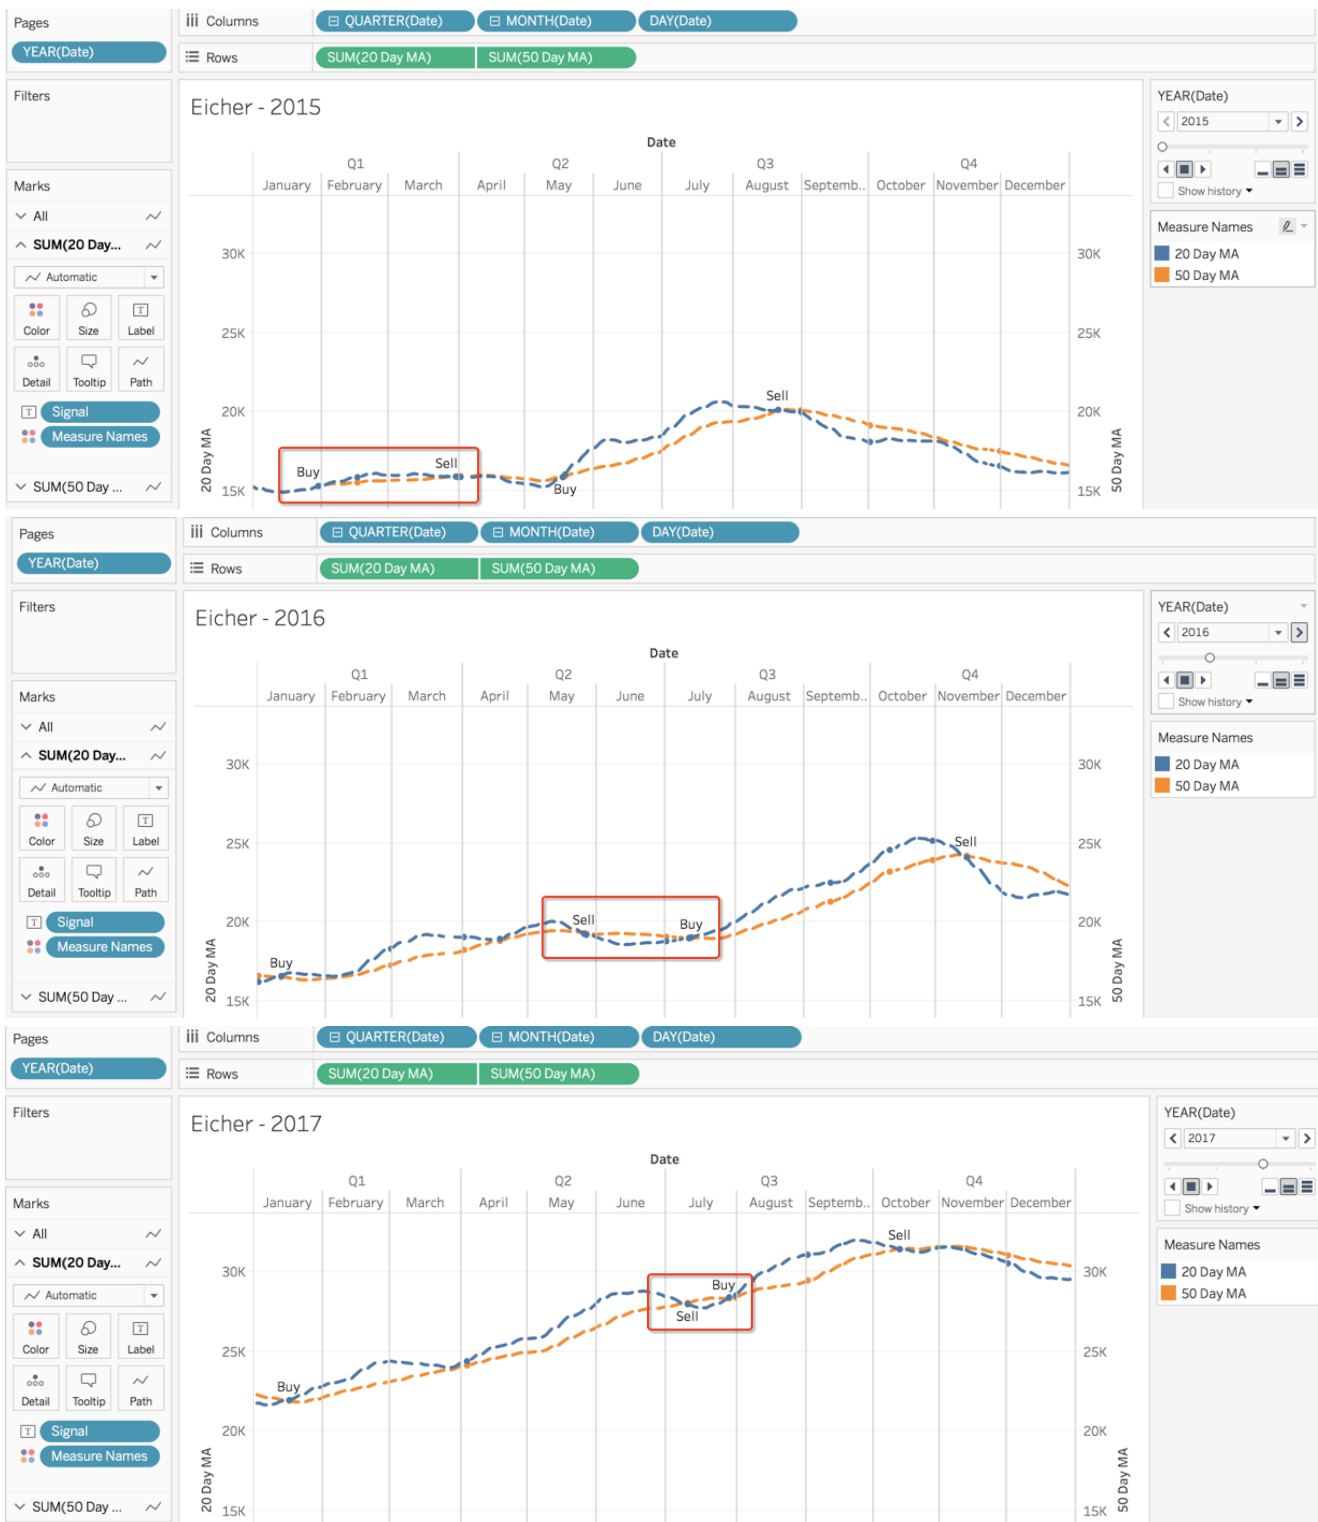

2) We can spot the same inaccuracies in 2018 as well:

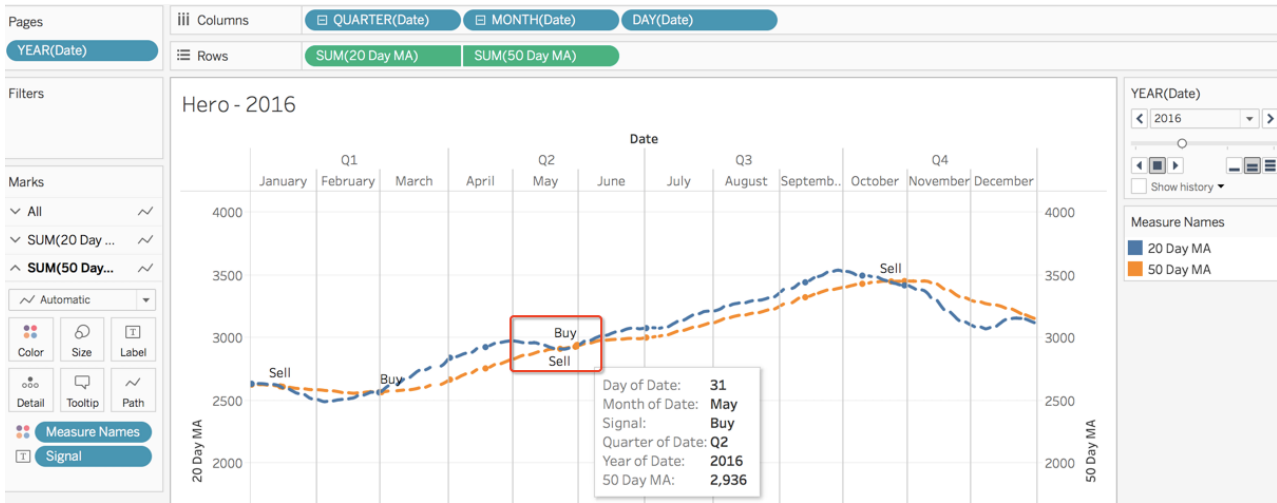

Eicher

We can spot inaccuracies in Eicher as well as shown below before a strong golden cross in the mid of 2015, 2016 & 2017 respectively:

Hero

1) A minor hiccup in the indicator can be spotted for Hero in 2016 where the Death and Golden Crossovers are extremely close followed by a strong golden cross:

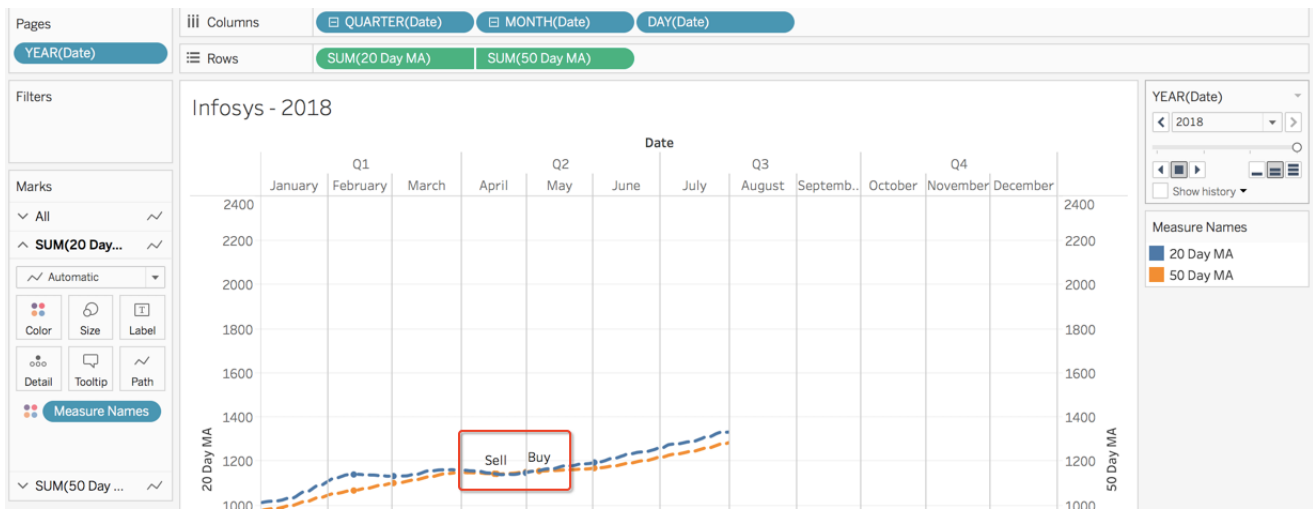

2) Similar case in 2017 as well:

Infosys

1) A Death & Golden Crossovers appearing very close in 2015 & 2018 for Infosys:

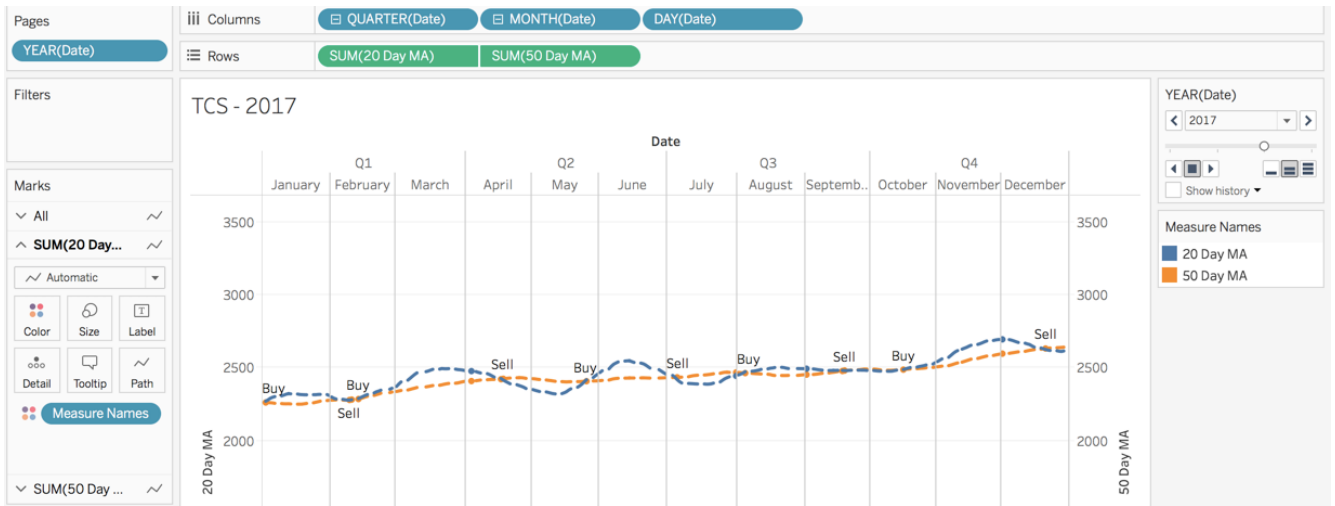

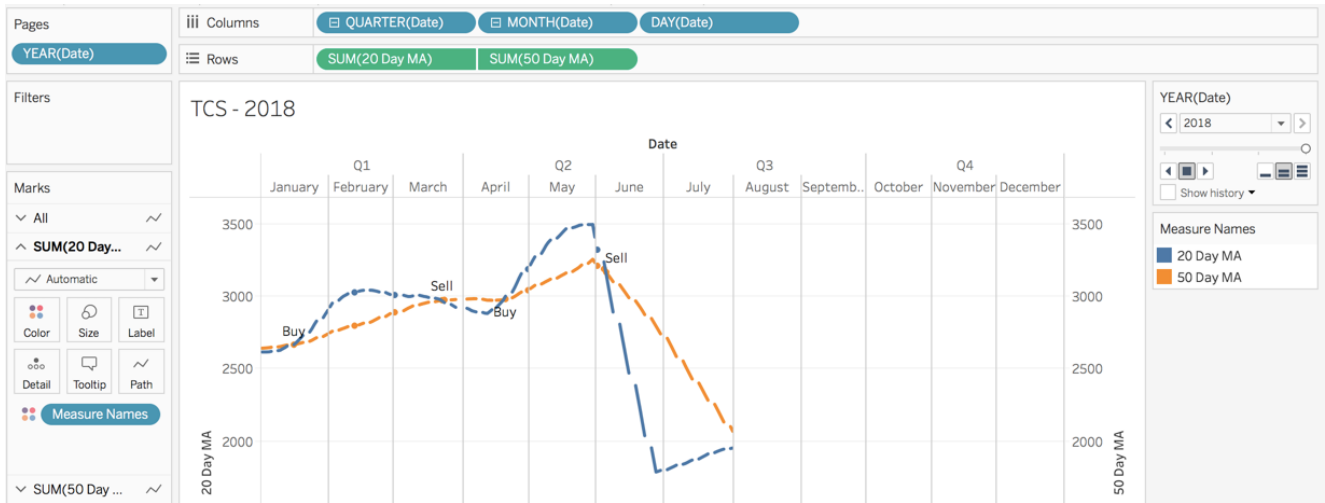

2) 2016 & 2017 shows the signals are not of much use again since both the averages are pretty close to each other for the most period:

TCS

Signals in 2015, 2016 & 2017 are not of much use to the traders as the closing price variation is very inconsistent unlike in 2018 where the signals to some extent indicated the actual ups and downs in the price:

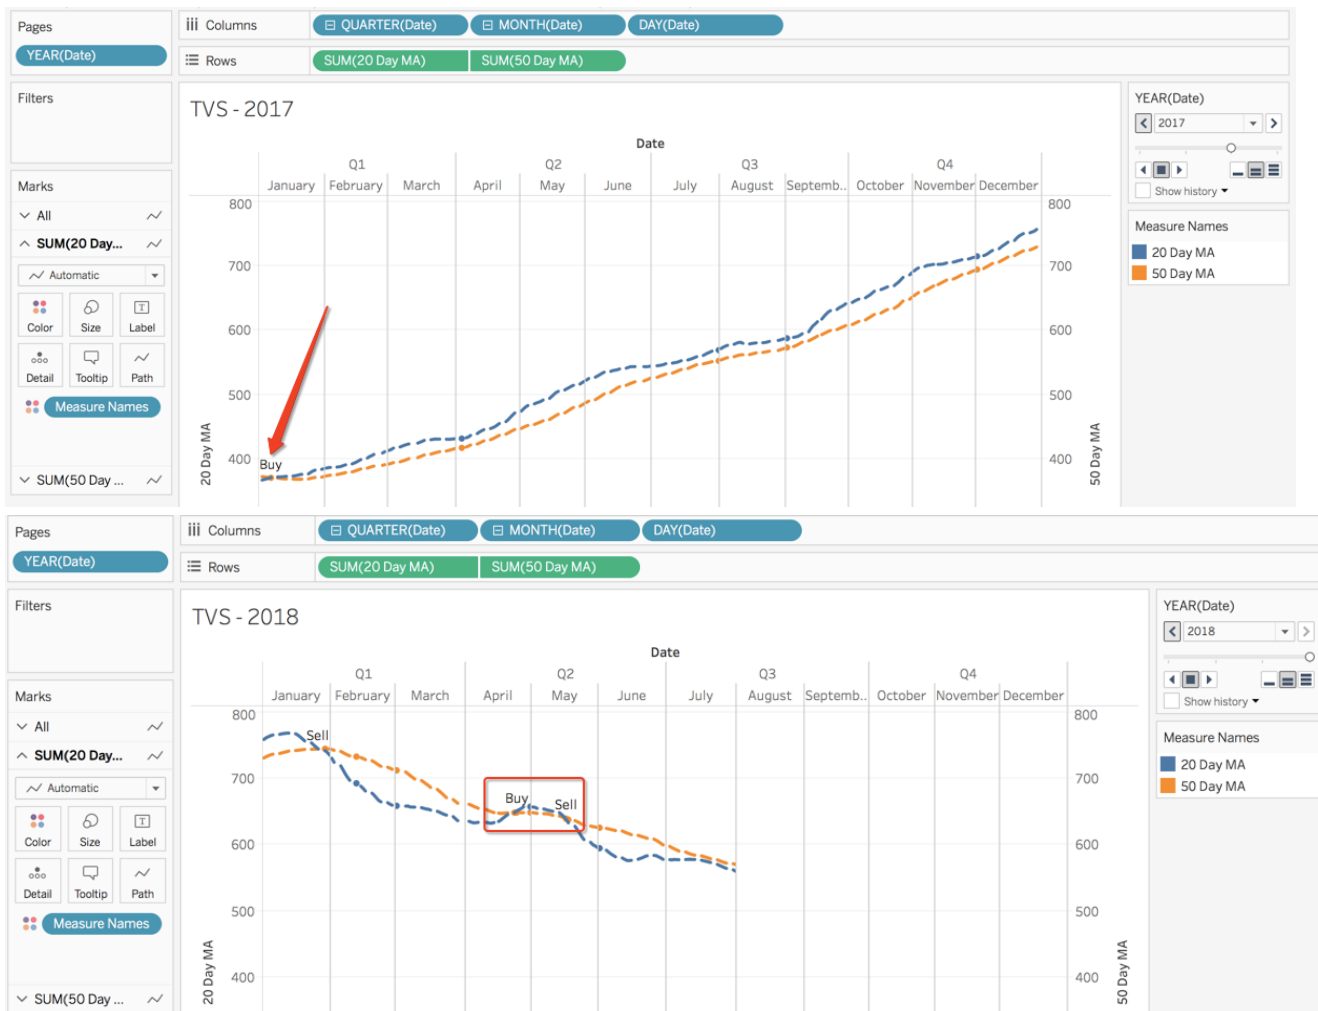

TVS

1) Signals 2015 & 2016 doesn't accurately indicate the actions traders are to take since the fluctuations in the closing price is high throughout the period:

2) The Golden Cross signal in 2017 is the most accurate one seen in this entire analysis which lasted for more than an year followed by an inaccurate Death & Golden Cross signals in Apr/May time period in 2018

Summary

Although the 20 Day MA and 50 Day MA crossovers signalled accurately to an acceptable percentage (>75%) for all the stocks, the above inaccurate signals might cause inconvenience to the traders. Instead of comparing a very fast moving average of 20 Day against a moderately fast moving average of 50 Day, it might make more sense to compare 50 Day MA with a more reliable MA which could be of 200 Day which filters out most of the noise to help make trading decisions, by crossing off some uncertainty the list of trading worries.
